Dental Hygiene Program

Overview of the Clinical Education Process

An integral, demanding, and rewarding part of the Dental Hygiene Program at Northampton Community College is clinical education (approximately 737 hours). Clinical education is divided into a total of four (4) clinical courses and three (3) labs in Oral Radiology, Local Anesthesia and Preventive Oral Health Services II.

The assigned clinical education site is primarily housed at the NCC Litwak Dental Hygiene Clinic, 3rd floor, NCC Fowler Southside Center, and at associated enrichment sites through the Bethlehem Partnership. The Dental Hygiene program provides facilities for the student to learn to competently and proficiently perform a full range of dental hygiene procedures on a variety of clients: children, adolescents, adults, and the elderly.

Assignments to a Clinical Site

Each clinical/lab course has a coordinator whose duty is to assign students to a experiences that gives them an appreciation and marketability in being “cross-trained” in a variety of roles within the dental environment. Students will be providers of dental hygiene services for the majority of clinical hours, including rotations on a mobile dental van providing placement of sealants, a rotation through St. Luke’s Dental Health Center providing preventive maintenance care through interprofessional collaboration with St. Luke’s dentists and staff of the dental residency program, and a few assignments presenting dental health education at area schools as part of the Community Dental Health curriculum. Students also will be educated and act in the role of office assistant, instrument processing assistant, and radiology assistant.

Sequence of Clinical Education Courses

The Dental Hygiene Program's clinical education courses are sequential in nature as follows:

Pre-Clinic (First-year, Fall Semester): Students begin to work toward achieving client assessment and instrumentation competencies while working on mannequins and student partners. Learning is assessed by hands-on demonstration of skills and achievement of competencies through formative feedback, journaling, and evaluation of processes and end-products. A weekly "tutorial" is included that provides for small group and active learning experiences that further aid in refinement and clinical application of dental hygiene theories. Students are randomly assigned (at orientation) to either the morning (8-11 a.m.) or the afternoon (12 noon-3 p.m.) session that meets on Tuesdays/Thursdays for the 15 weeks in the semester. Students meet twice per week for this pre-clinical experience for a total of six hours weekly in clinic and once a week for tutorial in an assigned classroom.

Clinical Preventive Oral Health Services I (First-year, Spring Semester): Students begin to work on clients, providing assessment, diagnosis, planning, and implementation and evaluation of dental hygiene therapies for clients with gingivitis and early periodontal disease. Students will continue to develop competency in client assessments and instrumentation. Learning is assessed by hands-on demonstration of skills and achievement of competencies through formative feedback, journaling, and evaluation of processes and end-products. A weekly "tutorial" continues to provide for small group and active learning experiences that further aid in refinement and clinical application of dental hygiene theories. Students continue as assigned at orientation to the morning (8:00 a.m.-12:00 p.m.) or the afternoon (1:00-5:00 p.m.) session that meets on Tuesdays/Thursdays for the 15 weeks in the semester. Students meet twice per week for this clinical experience for a total of eight hours weekly in clinic and once a week for tutorial in an assigned classroom.

Oral Radiology Lab (First-year, Spring Semester): Students will apply the knowledge, skills and attitudes necessary to competently expose and process diagnostically acceptable radiographs and to identify radiographic landmarks and radiographic evidence of dental disease processes. Students demonstrate competent radiographic technique on mannequins prior to performing supervised client exposures. Learning is assessed by hands-on demonstration of skills and achievement of competencies through formative feedback, journaling, and evaluation of processes and end-products. Students choose one of two available four-hour sections on a Tuesday or Thursday opposite one of their assigned clinic session times to complete the lab requirements over 11 weeks. Attendance at a mandatory one-hour orientation meeting is required prior to client exposures.

Clinical Preventive Oral Health Services II (Second-year, Fall Semester): Students continue to work on clients, further developing competency in clinical dental hygiene, with emphasis on assessment, diagnosis, planning, implementation and evaluation of dental hygiene therapies for the client with early-moderate chronic periodontal disease. New skills are introduced: impression taking, study models, pit and fissure sealants, root planing, tobacco cessation, tooth whitening, and intraoral camera imaging. Learning is assessed by hands-on demonstration of skills and achievement of competencies through formative feedback, journaling, and evaluation of processes and end-products. Students continue as assigned at orientation to the morning (8:00 a.m.-12:00 p.m.) or the afternoon (1:00-5:00 p.m.) session that meets on Mondays/Wednesdays/Fridays for the 15 weeks in the semester. Students meet three times per week for this clinical experience for a total of 12 hours weekly in clinic.

Preventive Oral Health Services II Lab (Second-year, Fall Semester): Students work in a lab setting on mannequins and student partners to learn new skills for periodontal screening and recording, indices, periodontal risk assessment, root planing, chemotherapeutic agent placement, diet counseling, impression taking, study models, advanced power scaling, pit and fissure sealants, tobacco cessation, tooth whitening, and intraoral camera imaging. Learning is assessed by hands-on demonstration of skills and achievement of competencies through formative feedback, journaling, and evaluation of processes and end-products. Students meet once per week on Thursdays (3:30-6:30 p.m.) for the 15 weeks in the semester.

Local Anesthesia Lab (Second-year, Fall Semester): Lab experiences prepare dental hygiene students to administer effective and safe infiltration and conduction anesthesia. Students meet for a total of seven (7) labs that generally are 2.5 hours in length on Tuesdays (3:30-6:00 p.m.) as assigned; one of the 7 labs is 2 hours in length.

Clinical Preventive Oral Health Services III (Second year, Spring Semester): Students continue to practice toward entry-level competency in clinical dental hygiene for a variety of clients with emphasis on providing comprehensive dental hygiene care for periodontally involved clients. Learning is assessed by hands-on demonstration of skills and achievement of competencies through formative feedback, journaling, and evaluation of processes and end-products. Students will also experience simulated private practice to aid in the acclimation to the workforce. Students continue as assigned at orientation to the morning (8:00 a.m.-12:00 p.m.) or the afternoon (1:00-5:00 p.m.) session that meets on Mondays/Wednesdays/Fridays for the 15 weeks in the semester. Students meet three times per week for this clinical experience for a total of 12 hours weekly in clinic.

Class Projects and Service Learning

In addition to working with the public during clinical sessions, students will have a minimum of four (4) opportunities to participate in dental health education and presentations to a variety of target audiences through class projects and to volunteer in organized service learning experiences. The projects are explained fully, along with the expectations, during Oral Health Care for Medically Complex Clients and Clients with Special Needs (first year) and Community Dental Health I/II (second year).

Typical Classroom and Clinical/Lab Education Schedules – Subject to Change *Sample*

Northampton Community College
Department of Dental Hygiene
Dental Hygiene Program Lecture Schedule
Summer Semester

Monday	Tuesday	Wednesday	Thursday	Friday
			8:00-10:50 DENH 212 (2nd yr) Pharmacology <i>Main; CC-169</i>	

NOTE: Chemistry of Life (CHEM 135) and English I (ENGL 101C) must be scheduled and completed PRIOR to taking any DENH coursework. First time college freshman must also take NCC's College Success course.

NOTE: 2nd year schedule appears in shaded area. Pharmacology (DENH 212) MUST be completed during Summer I/II and Speech Communication (CMTH 102) may need to be added during the summer semester upon individual need.

NOTE: 1st year schedule appears in non-shaded area. Students will select ONE radiology lab* on a Tuesday OR Thursday that is OPPOSITE to their pre-assigned AM or PM clinic section.

NOTE: 2nd year clinical schedule appears in shaded area.

Please note that enrollment in the Dental Hygiene program does not necessarily eliminate the need to take additional required courses during the day and/or evening. Days/times for clinical and lab sessions/classes are subject to change with notice.

Northampton Community College
Dental Hygiene Program
Essential Functions for Student Continuance and Graduation

The Dental Hygiene curriculum requires students to have adequate communication, motor, sensory, cognitive, behavioral and ethical abilities in order to ensure the health and safety of clients/peers and to successfully complete the program of study. The Essential Functions reflect the required abilities that are compatible with effective performance as an entry-level dental hygienist.

Abilities	Standard	Some Examples of Necessary Activities (not all inclusive)
Motor Skills/Sensory	<p>Gross and fine motor abilities sufficient to provide safe and effective care and documentation.</p> <p>Tactile ability sufficient for client assessment and treatment.</p> <p>Visual ability sufficient for observation and assessment.</p>	<ul style="list-style-type: none"> • Reaches, manipulates and operates equipment & instruments • Performs CPR • Performs palpation • Detects intraoral deposits and dental caries • Observes client responses • Discriminates color changes and shades of gray, i.e., lesion description, x-ray interpretation • Accurately reads measurements on instruments, i.e., probe
Communication	Communication abilities in English sufficient for appropriate interaction with others in verbal and written form.	<ul style="list-style-type: none"> • Reads, understands, writes and speaks English competently • Establishes rapport with clients and colleagues • Explains treatment procedures • Implements dental health education, diet & tobacco cessation counseling • Documents client responses, clinical findings and services rendered • Validates responses/messages with others
Behavioral/Emotional	The ability to perceive events realistically, to think clearly and rationally and to function appropriately in routine and stressful situations.	<ul style="list-style-type: none"> • Identifies changes in client health status • Handles multiple priorities in stressful situations • Adapts quickly to change • Uses good judgment • Empathizes with clients

Abilities	Standard	Some Examples of Necessary Activities (not all inclusive)
Cognitive/Critical Thinking	<p>Critical thinking/problem solving ability sufficient for sound clinical judgment.</p> <p>Comprehend, analyze, apply, synthesize and evaluate information.</p>	<ul style="list-style-type: none"> • Identifies cause-effect relationships in clinical situations • Develops care plans • Evaluates treatment outcomes • Seeks consultation in a timely manner • Uses critical thinking skills in both the classroom and in the clinical setting
Professional Conduct	The ability to practice dental hygiene ethically and to abide by the professional standards of practice.	<ul style="list-style-type: none"> • Accepts personal responsibility for actions - accountable • Courteous; appropriately open and candid • Honest • Maintains confidentiality • Manages conflict constructively • Functions interdependently with other healthcare providers • Meets deadlines; attends class/clinic • Tolerant, has respect for all human beings • Accepts criticism maturely • Maintains decorum in front of clients/peers • Complies with the clinical dress code; good personal hygiene

Penalty

If a student does not meet the essential functions in a pre-clinical, clinical or lab course the faculty member will issue an “F” grade for the course. The student will be referred to the program director and depending on the essential function deficiency the student may be dismissed from the dental hygiene program.

The student has the right to appeal the “F” grade or dismissal from the program by following the procedural steps listed in the College’s Student Handbook under: Appeal Procedure - Charges of Academic Dishonesty.
